

# Be Cool

When the temperature is higher than your score, you need apparel that will keep you moving—not melting *By Jessica Marksbury*

## Get a Grip

### FootJoy SciFlex

\$16; [footjoy.com](http://footjoy.com)

"MicroVent moisture control" leather (engineered to provide moisture resistance and remain softer longer) is utilized on the back of the glove to promote a cool, dry environment for optimum comfort.

### Nike Dri-FIT Tour

\$18; [nikegolf.com](http://nikegolf.com)

Dri-FIT material is strategically placed on the fingers, gussets and back of the glove to wick moisture away from your skin. This prevents a sweaty, slippery grip, while the perforated fingers enhance breathability.

### Callaway Ion

\$25; [callawaygolf.com](http://callawaygolf.com)

Antimicrobial performance mesh provides excellent ventilation and moisture management, as well as consistent fit and flexibility.

### TaylorMade Targa Tour

\$15; [taylormadegolf.com](http://taylormadegolf.com)

An antimicrobial performance fabric, moisture-wicking wristband and micro-perforated palm dissipate heat and moisture. Perforations all over the glove increase ventilation.

**FRESH INCARNATIONS** of your favorite moisture-wicking materials are available in everything from shirts to shoes. These selections will keep you cool, dry and cling-free on the course.

### Tehama Albatross Colorblock Polo shirt

\$64; [tehamainc.com](http://tehamainc.com)

This lightweight polo from the Hang 'em Dry collection features antimicrobial technology (to inhibit bacteria growth after frequent washings), an aerated back collar for increased ventilation and UPF 30+ protection from the sun.

### Nike Dri-FIT Plaid shorts

\$65; [nikegolf.com](http://nikegolf.com)

These lightweight shorts made from Nike's Dri-FIT fabric keep moisture away from your legs. The fabric is also textured to prevent clinging. One more benefit: There's no need to iron. Just wash them and then hang or tumble dry.

### FootJoy Pro Dry Pique Performance shirt

\$60; [footjoy.com](http://footjoy.com)

Foot Joy's exclusive Pro Dry material wicks away moisture, provides UV protection, has an antimicrobial finish that eliminates odor, and limits wrinkling and shrinkage.

### Dunning Stretch Performance shorts

\$79; [dunningsportswear.com](http://dunningsportswear.com)

This lightweight, stretchy pair offers a golf-specific cut and moisture-wicking technology that will not wear out after washing. Key ingredients include Coolmax (a performance fabric that moves perspiration away from the body) and Opelon (a fibrous cord that gives the "stretch" property).

### Greg Norman ML50 Interlock Stripe Polo shirt

\$65; [shark.com/gregnormancollection](http://shark.com/gregnormancollection)

The ML50 is pill-resistant, antimicrobial, and features "Play Dry" moisture-wicking technology. The 100 percent microfiber garment is 30 percent lighter than the average golf shirt. It's wrinkle-free, too.

### Adidas ClimaCool shorts

\$65; [adidasgolf.com](http://adidasgolf.com)

These antimicrobial, 100 percent polyester shorts dry quickly, keep moisture away and offer UV protection. A mesh ventilation panel in the rear (hidden from view) keeps your lower back cool and dry, which is especially useful if you walk and carry your bag.

## Shoe Stoppers

### FootJoy SuperLite

\$80; [footjoy.com](http://footjoy.com)

The ultra-lightweight EVA (ethyl vinyl acetate) outsole ensures that these shoes won't weigh you down, while the soft, waterproof leather upper helps provide breathability and comfort.

### Callaway X Series Hyperbolic

\$180; [callawaygolf.com](http://callawaygolf.com)

Callaway's innovative "Outlast technology" helps regulate the temperature in your shoe through the use of a "phase change" material that absorbs and releases excess body heat as necessary.

### Adidas Tour 360 Sport

\$160; [adidasgolf.com](http://adidasgolf.com)

Adidas's "50/50 Protect" technology offers a water-resistant thermoplastic urethane "shield" around the lower half of the shoe. This protects your feet from wet grass, mud and debris, while the lightweight mesh on the top half of the shoe promotes ventilation and flexibility.

### Ecco Ultra Performance

\$250; [eccousa.com](http://eccousa.com)

Ecco's anti-bacterial "memory foam" insole contours to your feet for sweet comfort while providing temperature control and moisture management. The soft "Hydromax" full-grain leather upper is water-resistant, too.
