

Garth Bennett

General Manager, Bridge Autos Palmerston

In May 2000, Ross Bond of Tri-Tech Shades was contracted to design and install a shade structure at our Palmerston car yard.

Our climate is very hot and our UV high making it very uncomfortable for customers to peruse our cars, and for our sales people to function effectively.

Since the installation of a shade structure, this problem has significantly improved making shopping more comfortable for our customers and providing cooler working conditions for our sales people.

The shade structure, draws attention from the street, protects the cars from damaging heat and also gives shade to our office and service department.

We are also able to use the shade structure columns to mount lighting, signage and flags.

We are very happy with the style, workmanship and shade the shade structure provides, and Ross was a pleasure to do business with.
